CC The amino acid substitutions are selected from H100, S116, S12K, 932E, CC N33D, N33F, and amino acids at positions 194, 195, 228, 249, 254, 302, or 316 of the mature protein C polypeptide substituted with Ser, Ala, Thr. CC His, Lys, Leu, Arg, Asm, Asp, Glu, Gly or Gln. Preferred protein C derivatives are given in AMB8275-7B. Also claimed are a vector CC comprising DNA encoding the novel human protein C derivatives.

CC transformed host cells and a method of producing the human protein C derivatives and disease states predisposing to thrombosis (e.g. myocardial CC typercability increasing protein or with tissue factor pattway inhibitor), CC comparished thrombotic occlusion, thrombosis in protein C deficiency, caute arterial thrombotic occlusion, thromboshism, or stenosis in C coronary, cerebral or peripheral arteries or in vascular grafts. Human CC patients with genetically predisposed prothrombotic disorders may be treated by grafts there we will laimed!

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a human protein C derivative. The protein is useful for treating vascular occlusive disorders, hypercoagulable states such as sepsis, disseminated intravascular hypercoagulation, purpura fulminans, major trauma, major surgery burns, adult respiratory distress syndrome, transplantation, deep vein thrombosis, heparin-induced thrombocytopenia, sickle cell disease, thalassemia, viral hemorrhagic fever, thrombotic thrombocytopenic purpura, and hemolytic uremic syndrome, and also useful for treating thrombotic disorders and acute coronary syndromes such as myocardial infarction, unstable angina, and stroke. Protein C derivatives with amino acid substitutions result in and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-APR-1999;

These derivatives have increased anticoagulation activity, resistance to serpin inactivation and increased sensitivity to thrombin activation compared to wild type protein C, and retains the biological activity of the wild type human protein C. Protein C derivatives are useful in the manufacture of a medicament for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disseminated intravascular coagulation; DIC; burn; transplantation; sickle cell disease; viral haemorrhagic fever; protein C deficiency; haemolytic uremic syndrome; acute arterial thrombotic occlusion;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; protein C derivative; anticoagulation activity; thrombosis; serpin inactivation; acute coronary syndrome; myocardial infarction; vascular occlusive disorder; hypercoagulable state; angina; sepsis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human mature wild type protein C.

Novel conjugate useful for treating or preventing septic shock, stroke

attached to protein C polypeptide comprising an attachment group. and myocardial infarction, comprises non-polypeptide group covalently

Claim 2; Page 79-81; 92pp; English.

diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced repail clearance. attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the provise that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Arm/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/naveravian) of strate and interaction after variance (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents zymogen increased serum half-life, increased resistant to inhibitors, reduced remain clearance, reduced immunogenicity and/or increased bloavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammaatory activity of APC bleeding while maintaining the antiinflammaatory activity of APC polypeptide moiety (II) The invention relates to a conjugate (I) comprising at least one nonprotein C upon which the variants of the invention were based introduced and/or at least one removed amino acid residue comprising an olypeptide moiety (II) (e.g. an N-glycosyl group) covalently atta protein C polypeptide comprising an amino acid sequence which di rom that of a parent protein C polypeptide (III) in at least one covalently attached to differs

New chimeric protein, cleavable by thrombin, useful e.g. as antithrombotic agents, particularly modified protein C containing Disclosure; Fig 1; 51pp; French. artificial activation sequence.

WPI; 2003-451127/43.

The present sequence represents the mature form of human protein C. This protein is an essential factor in the regulation of coagulation. The specification describes a chimeric protein, based on protein C, which comprises a thrombin-cleavable artificial sequence. This artificial sequence is of a formula given in the specification, and comprises a peptide from fibrinopeptide A, and a thrombin-cleavage site, other than that of the alpha-chain of fibrinogen. The chimeric protein and serine hypercoagulative diseases, e.g. venous and arterial thrombosis; myocardial infarction; pulmonary embolism; reocclusion after angioplasty and alterations in the genes for protein C and thrombomodulin protease derivatives obtained by cleaving the chimeric protein with thrombin, are useful as antithrombotic, antiinflammatory, antiapopto and profibrinolytic agents, for treatment or prevention of antiapoptotic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               당
                                                            believed to be removed (on basis of homology with bovine protein C), believed to be removed (on basis of homology with bovine protein C), cresidues 197-8 or 199-200), followed by carboxypeptidase or residues 197-8 or 199-200), followed by carboxypeptidase or caminopaptidase action, to form 2 chain protein C; residues 200-211 constitute the activation peptide, which is removed from the zymogen constitute the activated protein C; residues 212-461, once post cranslationally modified, constitute the activated heavy chain of active protein C; and the heavy chain of the 2 chain form of protein C zymogen, once post-translationally-modified, is composed of residues 200-461. Conce post-translationally-modified, is composed of residues 200-461. Conce post-translationally-modified, is composed of residues 200-461. Conce post-translationally-modified, is composed of residues 200-461. Conce post-translationally-modified protein C are regulators of haemostasis, composing from native protein C by increased sensitivity to activation by thrombin and thrombin/ thrombomodulin (even in presence of Ca ions) and confidence in vivo half life. They are useful as on-demand antithrombotic agents, (replacements for heparin and hydroxycoumarins) and for treatment confidence in the protein C deficiency states. (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                25-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                           This is the protein sequence of mascent human protein C encoded by the DNA of AAN90187, which is derived from cDNA clones prepd. from human liver mRNA. It comprises the following regions: residues 1-42 are the signal peptide and propeptide of human protein C, important for directing secretion and gamma-carboxylation of protein C; residues 43-197, once post- translationally modified, constitute the light chain of both the two-chain zymogen and activated forms of protein C; residues 198-9 are believed to be constituted forms of protein C; residues 198-9 are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human protein C; zymogen form; activated C protein; human liver mRNA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAP90401 standard; protein; 461
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA encoding zymogen form of human protein C - and its activated deriv., useful as e.g. antithrombotic agents more sensitive to thrombin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EP323149-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens

The activated protein can comprise one of 3 different truncated light chains, Ala(1) to Iys(150), Lys(151) or Arg(152). The activated HPC with a truncated light chain is more stable during storage. It can be administered for prophylactic and/or therapeutic treatments of disease states or injuries to enhance the patient's own anti- coagulative or fibrinolytic capabilities. The hybrid sequence would comprise at least one lipocortin phopholipid binding domain (PBD), e.g. of PAP-I, joined to a gla-domainless protein C or activated protein C. See AAQ12680-81 for such examples. See also AAQ12678-81. (Updated on 25-MAR-2003 to correct PA field.)

```

Example 1; Fig 2A-C; 34pp; English.

Human protein C (AAW02600) is a zymogen of a serine protease that plays an important role in the regulation of blood coagulation and the generation of fibrinolytic activity in vivo. It is synthesised in the liver and processed to a 2-chain molecule, which is itself converted to activated protein C. Protein C and activated protein C are useful in the treatment of thrombotic disorders. They can be produced e.g. in mammalia host cells using a cDNA clone (AAT32795) derived from Hep G2 cells. Variant protein C, modified to improve cleavage between the heavy and light chains of the circulating intermediate, can also be produced. (Updated on 25-WAR-2003 to correct PF field.) in mammalian

                                                                               Matches
                                                                                                                 Query Match
                                                                                                                                                                                                                 AAZ32159 to AAZ32194 represent reference alleles for specifically claimed nucleic acid sequences from the present invention which comprise polymorphic sites as given in a table in the specification, selected from 92 single nucleotide polymorphisms in which the nucleotide at the polymorphic site is different from a nucleotide at the same site in a reference allele. The nucleic acids, and primers and probes, are used to identify polymorphisms, which may predispose an individual to disease, especially a vascular disease. They can also be used in phenotype correlations, forensics, paternity testing, medicine or genetic analysis. AAY49550 to AAY49573 represent the proteins which correspond to some of

resistance to inactivation by sexpins compared with wild-type human protein C but retain the biological activity of the wild-type protein. The amino acid substitutions are selected from HIO, SIIG, SIZK, Q32K, CM 33D, N33F, and amino acids at positions 194, 195, 228, 249, 254, 302, or 316 of the mature protein C polypeptide substituted with Ser, Ala, Thr, CM His, Iys, Leu, Arg, Asn, Asp, Glu, Gly or Gln (numbering relative to the protein C mature protein sequence). Preferred protein C derivatives are protein C derivatives are a vector comprising NNA encoding the novel human protein C derivatives, transformed host cells and a combination with bactericidal permeability increasing protein C derivatives are useful for treating coronary syndromes and disease states compared to thrombosis (e.g. myocardial infarction and unstable comparison), vascular occlustive disorders and hypercoagulable states, sepsis (in combination with bactericidal permeability increasing protein or with hartering that the combosity of the protein of the protein or with the protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein or with protein

type activated human protein C. They also have longer half-lives in human
blood and hence require either less frequent administration and/or
smaller dosage than wild type human protein C for treating disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      uremic syndrome, and also useful for treating thrombotic disorders and acute coronary syndromes such as myocardial infarction, unstable angina, and stroke. Protein C derivatives with amino acid substitutions result in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein C deficiency; acute arterial thrombotic occlusion, thromboembolism or stenosis in coronary, cerebral or peripheral arteries or in vascular grafts in combination with a thrombolytic agent. Nucleic acid molecules of the invention are useful for treating humans with genetically predisposed prothrombotic disorders by gene therapy. The present sequence is human wild type protein C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       unstable angina; and disease states predisposing to thrombosis; vascular occlusive disorders and hypercoagulable states e.g. disseminated intravascular coagulation (DIC), burns, transplantations, thalassaemia, sickle cell disease, viral haemorrhagic fever and haemolytic uremic syndrome; sepsis in combination with bacterial permeability increasing protein, thrombotic disorders in combination with an anti-platelet agent;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human protein C derivatives and nucleic acid molecules encoding such derivatives. These derivatives have increased anticoagulation activity, resistance to serpin inactivation and increased sensitivity to thrombin activation compared to wild type protein C and retains the biological activity of the wild type human protein C. Protein C derivatives are useful in the manufacture of a medicament for the treatment of acute coronary syndromes e.g. mycoardial infarction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11-FEB-2000; 2000US-0181948P.

The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached t a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (I) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245cs/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr3025er/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-AUG-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) CC comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-CC (11fe or the serum half-life of a parent protein C polypeptide. The CC comjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and CC diagnosis/prevention) of stroke, myocardial infarction, after venous (CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult (respiratory distress syndrome (ARDS). The variant protein C has an CC increased resistance to activation by e.g. human plasma and alpha-1 (CC antitrypsin. The conjugates have an increased in vivo half-life, antitrypsin. The conjugates have an increased in vivo half-life, correased created the currently available (CC renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available (CC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a caministration of less protein, and fewer side effects. Moreover, a caministration of less protein, and fewer side effects. Moreover, a cativated protein () conjugates. This must be especially importan when conjugate has an extended plasma life. The gene for protein C: 1 located on chromosome 2013-014. The present sequence represents by: ursor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           片

This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The presents sequence represents a zymoger protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9

The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 (C increased resistance to activation by e.g. human plasma and alpha-1 (C increased serum half-life, increased in vivo half-life, increased increased in two half-life, increased increased in the carried complete offers a number of advantages over the currently available (C renal clearance, reduced immunogenicity and/or increased bloavailability. (C renal clearance, including longer duration between injections, available (C APC products, including longer duration between injections, cardinal stration of less protein, and fewer side effects. Moreover, a creduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-APR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claım 9; Page; 92pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-489875/52
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             15-0CT-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                          located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            substitution

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
```

This protein C sequence is obtd. upon transformation of mammalian host cells with a recombinant DNA sequence comprising cDNA and genomic DNA (minus introns) encoding protein C. The prod. collect- ed upon culturing of the cells has substantially the same biologic- al activity as natural protein C and is hence useful in the treat- ment of blood coagulation

Protein C DNA coding sequence and expression vector for prodn. - used for

blood coagulation disorders

```
Nascent human protein C produces inactive protein C. It is used as an anti-coagulant in myocardial infarction and deep vein thrombosis. The patent discloses a recombinant way of making activated protein C. Amino acids 1-42 encode the signal peptide and propeptide, 43-197 constitute the light chain of both the zymogen and activated forms; 198-199 residues are believed to be removed to form 2-chain protein C; 200-211 are the activation peptides removed from the zymogen to form activated protein C; 212-461 constitute the activated heavy chain after post-translational modification. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)

The invention relates to a conjugate (I) comprising at least one non-cc polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to Cc a protein C polypeptide comprising an amino acid sequence which differs cfrom that of a parent protein C polypeptide (III) in at least one set one can be attachment group for the mon-polypeptide group (e.g. an N-glycosylation catid stein Also included are (I) a variant (IV) of (III) comprising an constitution in a position (P) where (P) is an amino acid with at least consubstitution is not Thr2435er/Ala/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln comprising (IV); (3) an expression vector (VI) comprising (VI); (3) an expression vector (VI); (3) an uncleotide sequence (V) encoding (IV); (3) an expression vector (VI); (3) an expression (VI); (4) a host cell (VII) (CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-comprising (V) or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thromosis, distress syndrome (ARDS). The variant protein (DIC), sepsis, septic conjugates, variants and protein C parent protein (DIC), sepsis, septic conjugates variance, bare an increased in vivo half-life, increased resistant protein C has an conjugate syndrome (ARDS). The variant protein C has an conjugate syndrome (ARDS). The variant protein C has an conjugate syndrome (ARDS). The variant protein C has an conjugate syndrome (ARDS). The variant protein C has an conjugate syndrome (ARDS) and the conjugate syndrome conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in vivo half-life, conjugates have an increased in the conjugate syndrome conjugates have an increased in the conjugate syndrome conjugates have an increased in the conjugate syndrome conjugates have an increased in the conjugate syndrome

```
The invention relates to a conjugate (1) comprising at least one non-
CC polypeptide moiety (II) (e.g. an N-glycosy) group) covalently attached to
CC a protein C polypeptide comprising an amino acid sequence which differs
CC introduced and/or at least one removed amino acid residue comprising an
CC attachment group for the non-polypeptide (III) in at least one
CC site). Also included are (1) a variant (IV) of (III) comprising an
CC site). Also included are (1) a variant (IV) of (III) comprising a
CC substitution in a position (P) where (P) is an amino acid with at least
CC 54 of its side group exposed to the surface, with the proviso that the
CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII)
CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
CC life or the serum half-life of a parent protein C polypeptide. The
CC conjugates, variants and protein C proteins are useful as medicaments,
CC and in the manufacture of medicaments for the terestment (and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, mycardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced remai clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 25-APR-2002

                                                                                                                                                                                                                                                                                                                                                                                                   APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 9; Page; 92pp; English

CC introduced and/or at least one removed amino acid residue comprising an CC attachment group for the non-polypeptide group (e.g. an N-glycosylation CC site). Also included are (1) a variant (IV) of (III) comprising a CC substitution in a position (P) where (P) is an amino acid with at least CC syb of its side group exposed to the surface, with the proviso that the CC 53 of its side group exposed to the surface, with the proviso that the CC Tyr302ser/Ala/Thr/His/Iry/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) C comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC infe or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and C diagnosis/prevention) of stroke, myocardial infarction, after venous CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 c increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or intreased bioavailability. The conjugate offers a number of advantages over the currently available of Paper variant protein on the confidence included included increased resistant confidence in the confidence included included included included increased serum half-life, increased resistant to inhibitors, reduced the confidence included included included increased serum half-life increased serum half-life increased resistant to inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide moiety (II) (e.g. an N-glycosyl group) covalently atta
a protein C polypeptide comprising an amino acid sequence which di
from that of a parent protein C polypeptide (III) in at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 9; Page; 92pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a conjugate (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 419 AA;
